DETAILED ACTION

1. The following is an examiner's statement of reasons for allowance:

The prior art does not teach or fairly suggest a method of adaptively determining the exposure time and frame rate for each frame captured by an image capture system of the type having an image sensor, optics, and an image process, said method comprising the steps of: acquiring tow time-separated image frame, wherein each image frame includes one or more moving objects from the scene; spatially registering the two image frames; measuring spatial displacements between the tow image frames for the same moving object; determining a fastest moving object and calculating a speed of the fastest moving object; calculating object smear for the fastest moving object; if the object smear exceeds a maximum desired smear, calculating a new exposure time; setting the exposure time for a subsequent image frame to the new exposure time; if the fattest moving object exceeds a maximum desired displacement, calculating a new frame rate; and setting the frame rate for a subsequent image frame to the new frame rate.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
